

Costs and Charges

CFDs.com and CFDs.com Trader are trading names of BUX Financial Services Limited.

BUX Financial Services Limited is a company registered in England and Wales under register number 03148972. BUX Financial Services Limited is authorised and regulated by the Financial Conduct Authority, FCA Register number 184333.

1. Purpose

The aim of this document is to provide you with the information on all costs and associated charges - including information relating to both investment and ancillary services – related to the trading of Contracts for Difference (“CFDs”) and financial spread bets where applicable and where available to you.

In this document you will find a summary of the major components of costs and charges associated with trading such products with us, along with relevant illustrations for your understanding and convenience.

2. What Costs and Charges am I subject to?

We provide execution only trading services to retail and professional clients for CFDs. A CFD is a contract agreed between a client and their counterparty to exchange, at the closing of the contract, the difference in price between the opening and closing of the product. The execution of a CFD may incur the following costs:

- Spread Costs

Spread is the difference between the bid and ask price of the CFD product you trade. It can vary depending on product, time of day and on market conditions.

- Overnight Margin Financing Costs

If an eligible “long” CFD position is held - using leverage - and at the “financing calculation time” (as specified on the trading platform), your trading account may be subject to an “overnight margin financing charge”. This charge represents the cost of us extending leverage to you. In the case of you holding a short position – depending on the relevant currency deposit rate of the product in question - your account *may* be credited with an “overnight margin financing credit”. Such credits only occur when the relevant currency deposit rate of the product in question is in excess of the Financing Charge Mark-up.

- Costs related to Conversion of Foreign Currencies

For CFD positions denominated in a currency other than the base currency of the trading account, a currency conversion must be carried when any amount is credited to or debited from your account. For example, when closing a CFD position that is denominated in USD on an account that is denominated in EUR, the initial USD amount will be converted to EUR. Such conversions will be executed at a rate that includes a mark-up over and above the spot FX rate.

In addition, you may also incur the following additional costs and charges but they are independent of your chosen trading strategy:

- Inactivity fees

3. Costs and Charges Illustrations

Please refer to Table 1 (CFDs) and Table 2 (Spread Betting) for detailed overviews of how our costs and charges are calculated for spread and overnight margin financing.
